

Judeson (Jude) Mirac

Hamilton, NJ | judemirac20@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Analyst with experience cleaning, validating, and analyzing operational data to improve reporting and decision-making. Skilled in SQL, Python, Excel, Amazon QuickSight, dashboard development, trend analysis, and process improvement. Experienced in building recurring reports, defining performance metrics, reconciling data across sources, and translating findings into clear recommendations for cross-functional leaders. Currently pursuing an MBA in Business Analytics, with projects in data pipelines, predictive modeling, and AI-enabled analytics.

WORK EXPERIENCE

Amazon

Swedesboro, NJ / Burlington, NJ

Operational Risk & Compliance Analyst | 40 hrs/week | May 2025 - Present

- Reduced Incident Data Quality Defect Rate (IDQDR) from 40% to 12% by identifying recurring documentation defects, strengthening validation checks, and standardizing record verification, improving the reliability of compliance reporting and audit readiness.
- Identified compliance and completion gaps through program-performance analysis and coordinated targeted corrective actions with operational leaders, increasing mandatory program completion by 92%.
- Analyzed incident and operational-risk trends across process paths to identify recurring control gaps and high-risk activities, helping leadership prioritize targeted interventions that contributed to an 8% month-over-month injury reduction.
- Developed recurring management reports across Excel, Amazon QuickSight, and SharePoint to surface audit progress, training status, data-quality gaps, and below-goal performance for cross-functional leadership.
- Conducted operational walkthroughs and control reviews to identify process deficiencies and operational risks, then partnered with process owners to develop, track, and verify corrective actions through implementation.
- Managed a weekly feedback-and-observation control loop across 300 observations, sustaining 100% on-time closure, 100% site feedback coverage, and a 4.20/5 employee feedback rating.

Hudson Community Enterprise

Jersey City, NJ

Database Support | 30 hrs/week | Jan 2023 - March 2025

- Reviewed and standardized source documentation, corrected missing, duplicate, and inconsistent fields, and converted raw client records into structured database-ready data for downstream reporting, including Excel-based administrative workflows.
- Performed record-level data-quality checks before database updates, reconciling source documents against existing entries and maintaining consistent field naming, formatting, and completeness across client records.
- Maintained confidential client datasets across healthcare, government, legal, and engineering accounts, supporting accurate internal reporting and record retrieval while meeting privacy, consistency, and turnaround requirements.

EDUCATION

Saint Peter's University

Master of Business Administration, Business Analytics

Jersey City, NJ

Expected Jun 2027

Saint Peter's University

Bachelor of Science, Business Management

Jersey City, NJ

2024

PROJECTS

Safety Risk Analysis Pipeline | SQL, Python, pandas, SQLite, Excel

GitHub: github.com/JudeMirac/Saftey-Risk-Analysis

- Built a layered SQL/Python analytics pipeline to determine where workplace risk was concentrated and why, moving synthetic incident and exposure data from raw CSVs through SQLite staging, integration, context, and feature layers while preserving the structure of a real operational risk analysis.
- Applied data-quality checks and exposure-normalized incident rates, then compared process paths, severity, root causes, and contributing factors; the top 10 paths accounted for 75.5% of incidents and the top five root causes for 76.9%, creating a targeted risk-prioritization framework.

Fraud Risk Modeling & Decision System | Python, pandas, scikit-learn

GitHub: github.com/JudeMirac/Fraud-Model-Project

- Designed an end-to-end fraud analytics workflow to identify high-risk transactions while limiting unnecessary manual review, analyzing merchant, payment, device, transaction-velocity, and chargeback patterns; engineered interaction features and compared Logistic Regression and Random Forest with class weighting.
- Converted ranked model scores into percentile-based ALLOW (80%), REVIEW (15%), and BLOCK (5%) decision tiers, intercepting 61% of fraudulent transactions through review/block while keeping review volume constrained and supporting a practical customer-risk tradeoff.

AI Alpha Terminal / AI Investment Tracker | Python, Streamlit, pandas, Plotly, yfinance, OpenAI API

GitHub: github.com/JudeMirac/AI-Stock-Dashboard

- Built a multi-page market research terminal to centralize fragmented investment-research workflows, integrating yfinance market data, earnings, news, watchlists, historical snapshots, trade-journal data, and technical metrics in Streamlit.
- Developed a context-grounded AI research assistant and command center that combines technical, social, and event signals into a 0-100 research-priority score, tracks score changes, and generates evidence-based briefs using only the terminal's internal datasets.

CERTIFICATIONS

- Python Project for Data Science, IBM / Coursera, Aug 2025
- Databases and SQL for Data Science with Python, IBM / Coursera, Jul 2025
- Python for Data Science, AI & Development, IBM / Coursera, Jun 2025
- Excel Basics for Data Analysis, IBM / Coursera, Jun 2025
- Data Visualization and Dashboards with Excel and Cognos, IBM / Coursera, Jun 2025
- Introduction to Data Analytics, IBM / Coursera, Jun 2025

COLLEGIATE ATHLETICS

Saint Peter's University

Division I Track & Field Student-Athlete

Jersey City, NJ

2021 - 2025

- Placed 4th in the 100m at the Metro Atlantic Athletic Conference Outdoor Championships, demonstrating discipline, consistency, and performance under pressure.
- Competed in sprint events while balancing Division I athletics, academic responsibilities, training, travel, and professional development.
- Built strong habits in accountability, resilience, teamwork, and time management through daily training, competition preparation, and long-term goal setting.
